

Polytopes, cones and complexes-III.  
Bivas Khan, IITM

In this series of talks we will discuss Polytopes, cones and complexes from the book "Polytopes, Rings and K-theory" by Bruns and Gubeladze. The aim of this talk is to develop notions of convex geometry and of combinatorial topology related to convexity. In the first talk we will give some basic definitions and properties of polyhedra.

Pre-requisites :  
Familiarity with concepts discussed in the previous talks and basic ring theory.
