

Project title - Green hydrogen through biomass gasification

A novel process for green hydrogen synthesis through biomass gasification has been developed and demonstrated at bench scale at the TDCE laboratory of IITM. With funding from industry we are starting work on scaling-up this process to pilot level. If you are the type of person who is excited by the possibility of contributing to technology transfer from lab to field, this is the project for you. If selected, you will be working with a team of young and dynamic engineering researchers. There are also monetary incentives on top of your regular scholarship based on your performance. Interested? Write to varuns@iitm.ac.in with a copy of your CV.
